

## What is this?

## Worms Against Nuclear Killers

#### OPERATION: TITSTORM A PART OF OPERATION INTERNET FREEDOM

THE ATTACK!

 On February 10th 8:00 AM Australian time we will begin a DDoS of government servers

 This will be quickly followed by a shitstorm of porn email, fax spam, black faxes, and prank phone calls to government offices (emails/faxes should focus on small-breasted porn, cartoon porn, and female ejaculation, the 3 types banned so far)

DDog Tools & Instruct work

### Geotags

# Terms used loosely, interchangeably and dangerously

#### **Cybercrime**

#### Old Wine, New Bottles?

 Traditional crimes that are committed or enhanced with the use of technology

(Eg. Fraud, stalking)

 New crimes that have Emerged as a result of a technology (Eg. "Hacking"/Unauthorised Use)

# **Convention on Cybercrime**

Fraud/Forgery

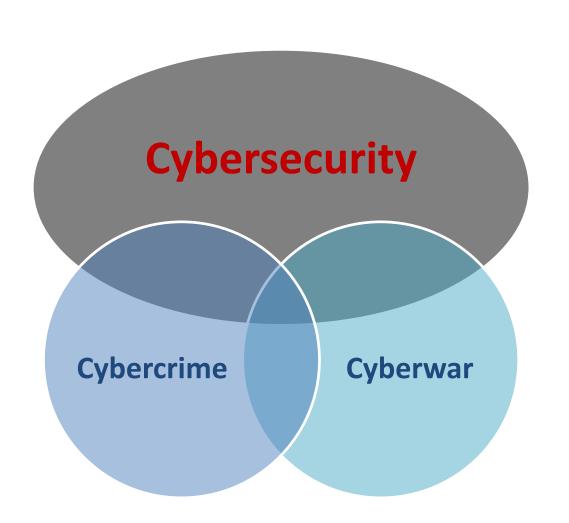

Copyright Infringement

Child Pornography

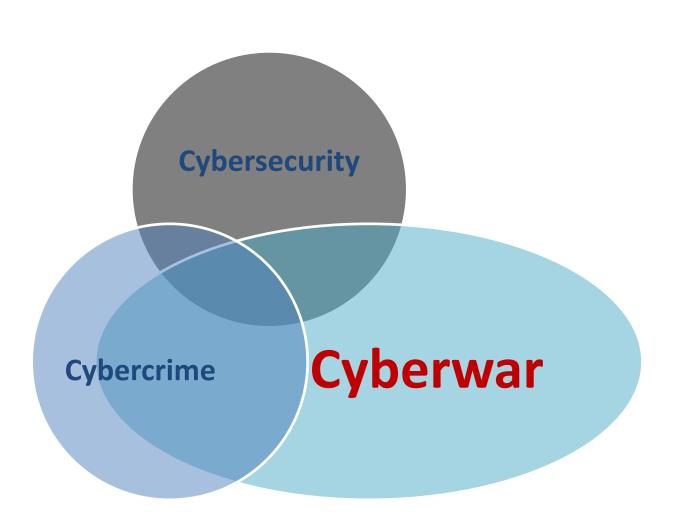

Unauthorised Access, Modification, Impairment or Interference with Data, a Data System, or a Computer

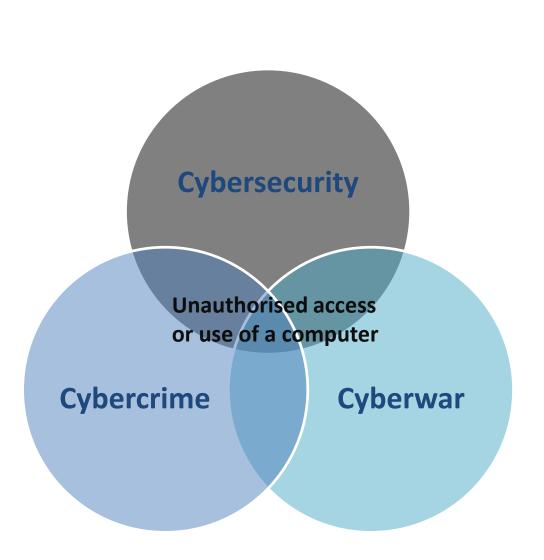

# Cybersecurity

 Cybersecurity is the protection of data, data systems and computers from unauthorised access, modification, impairment or interference.

# Cyberwarfare

- Cyberwarfare involves actions taken to affect an adversary's information and information systems while defending one's own information, information systems and critical infrastructure.
- Cyberwarfare differs from cybersecurity in that the cyber-attacks are initiated through government infrastructure (by the state) or are state sponsored.
- The cyber-attacks must either be used in armed conflict or where there have been acts of use of force, or in the lead up to armed conflict and use of force.

#### **Trends & Threats**

 No single Australian department, organisation, corporation, university, or military division has the skill and resources available to combat many of the current threats that we will see today, and not the capability to counter future threats.

# No network or technology is immune from attack.

 Cyber-security reports around the globe have alleged high-scale state-sponsored espionage of government and corporate information.

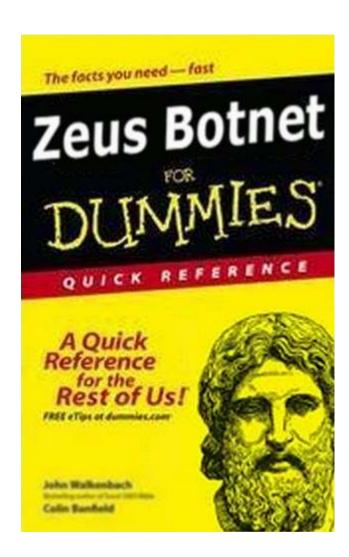

# Even Luddites Can Participate

 Many forms of cyber-attack do not require sophisticated computer skills or high levels of start-up money.

### **Denial of Service Attacks**

Georgian banks, telecommunication corporations, government websites, non-state sponsored Russian newspapers, political opposition (Eg. www.kasparov.ru)

All attacked in a coordinated fashion in the middle of the night August 8, 2008

### Attacks in RBN Format

- ICMP traffic, not tcp
- Attacks generated from known RBN registrants (Eg. Incasher.net)
- Attacks traced to 'Abdullah Operation' on Turkish ISPs with known registered domain names from Ukraine (WHOIS directory)

# Russia Bombs Georgia

Bombs are dropped hours after cyber-attacks.

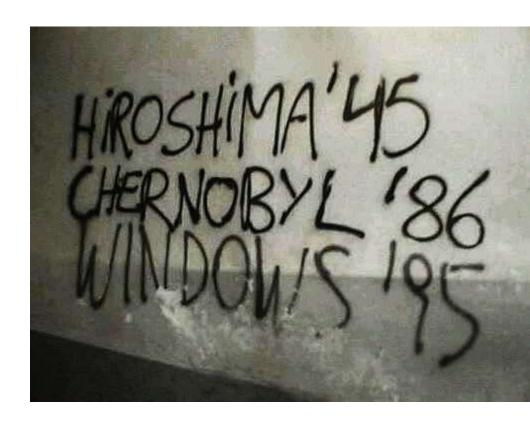

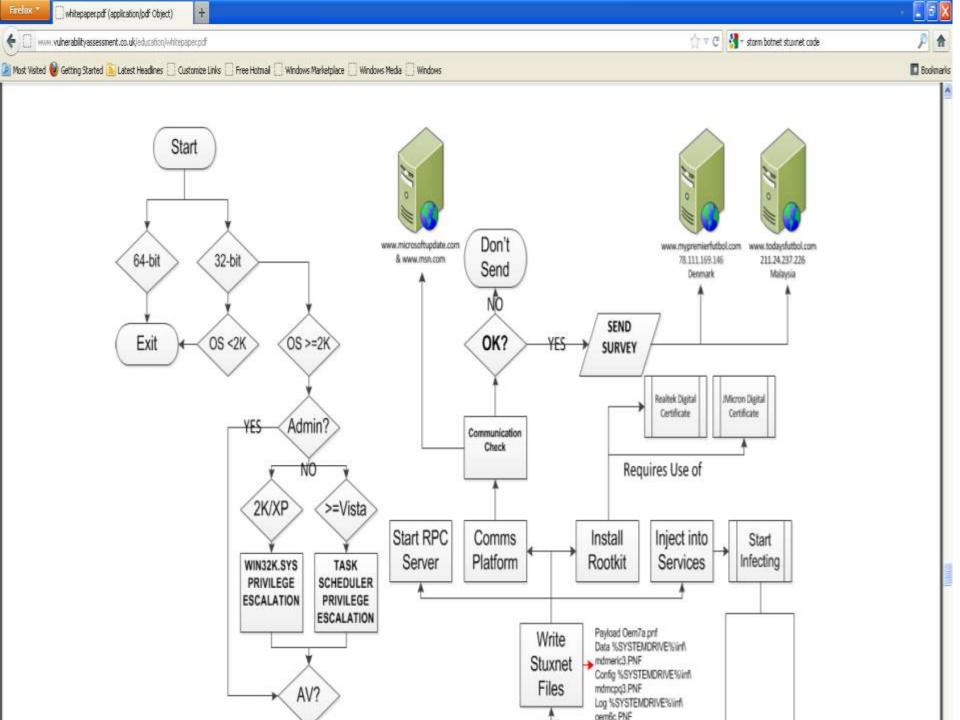

### Media is slow to pick up coverage of events

- To the outside world, all attacked Georgian websites appear to be functioning
- As they stood on August 7
- DNS resolvers are not working have been subverted!

#### Connected to Critical Infrastructure

# Political and religious based hacking on the rise

Arabia decided to launch an attack ago of Israeli banks, today, 01/17/12 Saudi Arabia at the following address ug, in addition there may be disruption

Arabia will continue, we will move to me to weeks or even months.

# "Cutting Sword of Justice"

# All Saudi Arabian Ministry of Defense websites hacked by Syrian Electronic Army

# PAKISTAN HAXORS

# China Philippines

#### Spratley Islands and Scarborough Shoals

"Threatening world peace with ICBMs and Nuclear weapons/Wasting money while his people starve to death."

### Stealth

Your average espionage attack lasts for 458 days until the organisation discovers it has been attacked.

Many of these attacks are the cyber equivalent of advance persistent attacks.

### Over-cover Intelligence

- Professional security experts gravitating to lucrative over-cover intelligence of exploits trade
- Governments, businesses and organisations purchasing vulnerability and exploit information but turning a blindeye to how it is obtained

# **Dangers**

Difficulty in traceback to the true source of an attack.

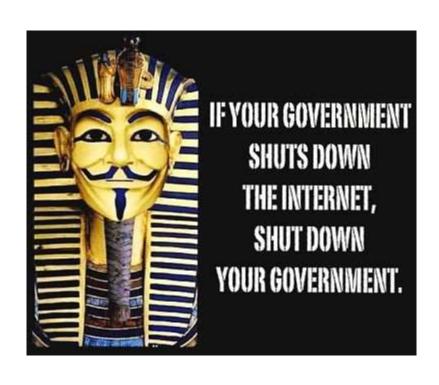

# Should this be part of the cybersecurity agenda?

# twitter data logs as surveillance
